

Running Mangocore Locally

Windows

Download the `mangocore_windows_32.exe` or `mangocore_windows_64.exe` binary, depending on whether your computer is 32 or 64-bit. If you don't know, download the 32-bit binary. Also download the sample case JSON files from the competitor folder (<https://www.dropbox.com/sh/4p2fu9suhlyt048/AABEJ7IXfE1PhzBZWaJCAYLca?dl=0>), and place them in the same folder as the Mangocore executable.

Then open a command prompt window in the same folder as Mangocore (right click in Windows Explorer while holding Shift and click "Open a command prompt window here"). Type in

```
mangocore_windows_32.exe -case <CASE FILE>.json
```

where `<CASE FILE>` is the name of the case you want to run. Navigate to localhost:10914 in your web browser and use the username and password "trader0" to log in.

Mac OS X

Download the `mangocore_mac_32` or `mangocore_mac_64` binary, depending on whether your computer is 32 or 64-bit. If you don't know, download the 32-bit binary. Also download the sample case JSON files from the competitor folder (<https://www.dropbox.com/sh/4p2fu9suhlyt048/AABEJ7IXfE1PhzBZWaJCAYLca?dl=0>), and place them in the same folder as the Mangocore executable.

Then open a Terminal window and `cd` to the folder containing Mangocore. Type in

```
chmod +x mangocore_mac_32 (you only need to run this command once)
./mangocore_mac_32 -case <CASE FILE>.json
```

where `<CASE FILE>` is the name of the case you want to run. Navigate to localhost:10914 in your web browser and use the username and password "trader0" to log in.

Linux

Follow the Mac OS X instructions, but download the `mangocore_linux_32` or `mangocore_linux_64` binary instead.
